

## OMC Operations

- OMC operations are performing very smooth.
- OMC team will send the procedures to be used when the instrument is left unattended for long intervals by end of November
- OMC analysis stable, no updates expected.

## OMC Calibration

- Flatfield correction more stable,
  - *but still using the small scale correction from the Earth Observation data.*
- Lost one flatfield calibration activity (rev 606) because of a ToO (SGR 1806-20).
  - *It was not re-scheduled.*
- Waiting for implementation of new calibration strategy.
  - *It would allow the OMC team to derive the small scale correction by using more recent data than those from the Earth Observation.*
