

JEM-X: Thermal alignment effects

CBJ, SB, NJW, NL
DNSC

JEM-X Cross-Correlation

Skyim = Detim*Mask

Skyim(u,v) = $\sum_i \text{Detim}(x_i, y_i)$, where Mask_{u,v}(i) open.

JEM-X: Analog Imaging. Energy dependent position resolutions.

Pixel Size ? < mask hole, in most cases 1.5 mm.

Skyim: 525x525 pixels (13x13 deg) of 1.5'x1.5'.

Skyim/Bckim/RMSim

CBJ 11/24/2006

Detim: Crab on-axis

CBJ 11/24/2006

Source Finding

1 pixel: 1.5'x1.5'

CBJ 11/24/2006

JEM-X PSF

$$N = N_{\text{peak}} * f_{\text{dead}} * f_{\text{coll}}^{4/3}$$

CBJ 11/24/2006

Source Localization

JEM-X1 Misalignment:

4000 detections of
strong sources in Orbit
270 to 320.

CBJ 11/24/2006

Source Localization

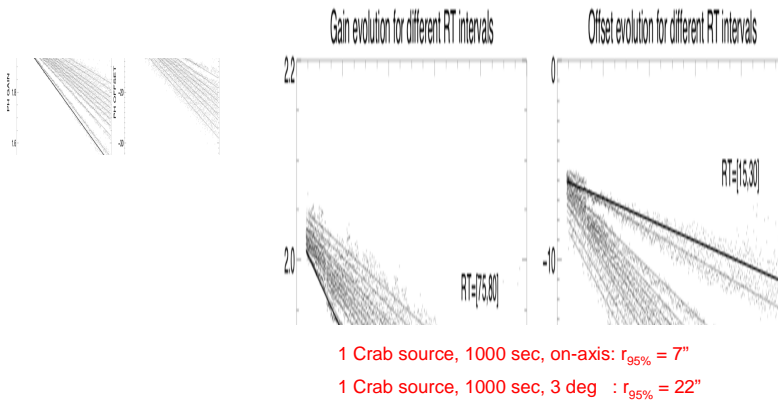

The JEM-X alignment was determined from 4000 detections (> 1 year) of
well known sources: Cyg X-1, Cyg X-3, GRS 1915, Ser X-1, Sco X-1, GX 17+2, GX 9+1, GX 5-1, etc

Detection Significance and Off-axis Angle

CBJ 11/24/2006

Source Localization

Contour lines of 95% confidence radii (arcseconds)

1 Crab source, 1000 sec, on-axis: $r_{95\%} = 7''$

1 Crab source, 1000 sec, 3 deg : $r_{95\%} = 22''$

CBJ 11/24/2006

Source Localization

The JEM-X alignment was determined from 4000 detections (> 1 year) of well known sources: Cyg X-1, Cyg X-3, GRS 1915, Ser X-1, Sco X-1, GX 17+2, GX 9+1, GX 5-1, etc

Mask Temperature

Slope = 0.42 arcsecond/deg C

CBJ 11/24/2006

Source Localization

 +0.42 arcsecond/deg C
