

# INTEGRAL Saving Measures

P. Kretschmar – INTEGRAL Mission Manager  
INTEGRAL User Group Meeting  
ESTEC – 26 November 2013

- From 2013 on:
  - No scientific observations (with IBIS, JEM-X, OMC) during periods of SPI annealing.
  - Conservative margins for radiation-belt-passages (instruments switch-off).
  - Reduction of ToO support by increasing the required reaction time to ToO notifications to several days. No on-call support for ToO notifications and ToO implementations on weekends.
- From 2014 on (additional to the above):
  - Freeze INTEGRAL archive development at ESAC (**effective from Oct 2013**)
  - Reduced support for special observations (e.g. observations with customized dither patterns or scans).
  - Simplify the AO structure, and revert to a single, annual AO for observing proposals.
  - Stop contract for industrial support.
- From 2015 on (additional to the above):
  - Reduced INTEGRAL SOC software support.
  - Further reduction of observing support.
